

Description

One and two pole thermal-magnetic circuit breaker in compact design with slide actuator, trip-free mechanism, various trip characteristics and optional auxiliary contacts.

Meets the requirements of the circuit breaker standard EN 60934 (IEC 60934): S-type, TM.

Typical applications

Protection of AC and DC control circuits in industrial automation applications and buildings, e.g. in the chemical industry, power plants, steel industry and machine construction (machine tools, packing machines etc.)

The envelope size of type 2216-S with socket 80plus or 81plus complies with the requirements of DIN 43880 (built-in equipment for electrical installation).

Time/current characteristics

¹⁾ Magnetic tripping currents are or the curves M1 and F2 are increased by 30 % on DC supplies.

When mounted side-by-side, the breakers can only carry up to 80 % of their rated or a higher rating should be selected (please also see Technical Information).

The time current characteristic curve depends on the ambient temperature. In order to eliminate nuisance tripping, please multiply the circuit breaker current ratings by the derating factor shown below (please also see Technical Information).

Ambient temperature °C	-30	-20	-10	0	10	23	30	40	50	60
Derating factor	0.76	0.79	0.83	0.88	0.93	1	1.04	1.12	1.22	1.35

Caution: High inrush peaks of < 0.003 sec. may trip the breaker.

This is a metric design and millimeter dimensions take precedence ($\frac{\text{mm}}{\text{inch}}$)

All dimensions without tolerances are for reference only. In the interest of improved design, performance and cost effectiveness the right to make changes in these specifications without notice is reserved. Product markings may not be exactly as the ordering codes. Errors and omissions excepted.

Description

Single pole, with PT connection technology, to accommodate 1- or 2-pole circuit breakers type 2216-S

Part number: 80PLUS-PT01

- Push-in design: push the stripped wire (cross section $\geq 0.25 \text{ mm}^2$, rigid or with wire end ferrule) into the round hole of the terminal without using a tool
- For smaller cable cross sections or flexible wires without wire end ferrule you have to push in the orange push button to open the spring.
- For release push in the orange push button with a screw driver.

* Max. bridge current: 32 A

When using two busbars/jumpers (in both bridge shafts of terminal 1), the max. current capacity is 41 A.

Caution:

When using busbars/jumpers for bridging the aux. contacts (11(a), 12(b) and 14(c)), the max. bridge current is 4 A

Coding table

Coding example:

Avoid hazardous oversize current ratings

Your benefit:

Coded circuit breakers can no longer be inserted into slots with a lower current rating coding.

Coding of circuit breakers and sockets

Sockets: Insert coding pins in accordance with coding table into receptacles of the sockets.

Circuit breakers: Remove coding pins in accordance with coding table by means of screw driver.
