

## Important information: New generation of 3120 circuit breakers

The **3120** circuit breaker/switch combination has been one of E-T-A's best-selling products for many years. Based on feedback we received from our customers over the past few years, we launched a new enhanced generation, the N design, in July 2019. Thanks to e.g. freely accessible rocker actuators and large push buttons, the new breakers can always conveniently be operated, even if fitted with actuator guards or water splash protection. In addition, the globally unique accordion-style seal for the rocker-actuated version excludes machine failures and product rejects caused by dust or water ingress.

**Important to know:** Identical mounting cut-outs and performance data allow quick and easy interchange of the breakers, supported by unchanged approval data.

Can we support you with cross-referencing? Please do not hesitate to get in touch with your contact person in our Customer Service (ICS).

By the end of this year, the new design version **3120-N** will entirely replace the predecessor **3120-F**. The last order date for series **3120-F** is the 31 December 2020 (date of last order acceptance). Production stop will be on 30 June 2021.

### Changes in form, fit and function of 3120-N:

#### Product design (form)

- New flange design with rounded shape
- New actuator guard (rocker-actuated version)
- New accordion-style seal (rocker-actuated version)
- Larger push buttons
- Elimination of 3120-F2, 3120-F6 and 3120-F7 versions

#### Product integration (fit)

- Minor changes of the panel thicknesses of versions with dust/water splash protection (see table in data sheet page 5)
- No changes with regard to mounting holes

#### Product function and approvals (function)

- No changes
